(MCG Ultimate)

10 (dot)
11 (oval)
Both RGB

Voir le numéro des leds et leurs couleurs possibles

First, you need to be clear about where, under what numbers and with what possible colors the Leds are.
To do this, add the line Test Misc Enabled =1 to the [Common] section of the zconfig.ini file.

Going to the Test-Misc tab, in the lower right corner in the Led N window, enter the numbers in sequence 0,1,2,3,10,11 while pressing the Fast Test button - you will be shown the location and possible colors of Leds.

After this test, you need to restart the controller with the Restart button.

Secondly, I advise you not to change the lines with the events [Zero event = at power on] and [Calibration = at calibration], which are set to 0 [SYStem] LED.
You can remove this event from the 10 led on the grip and set it to something else.
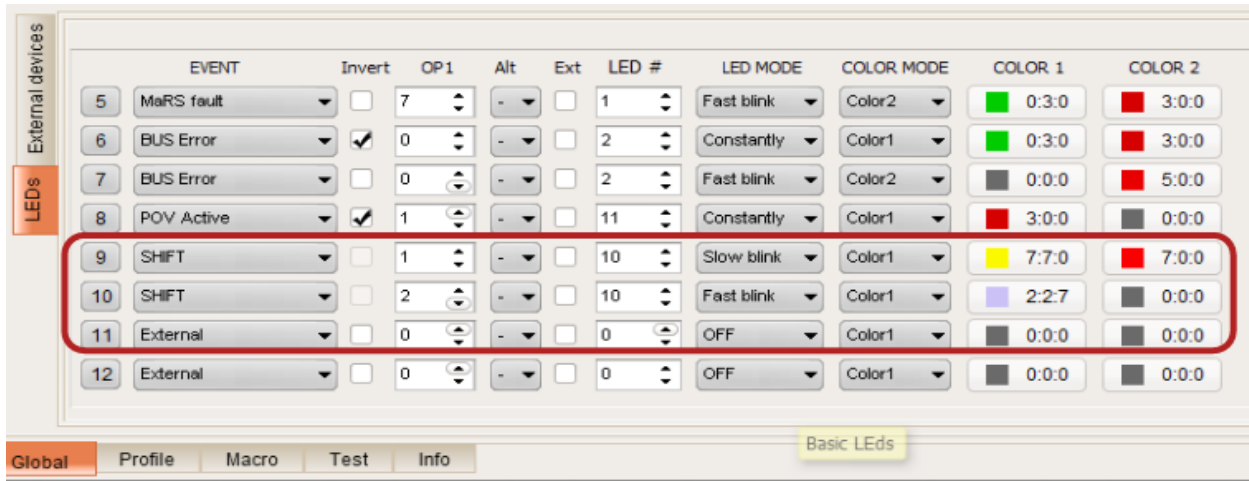

Exemple programmation de Led du MGCPRO_U
Led 10 associée aux modes SHIFT1 et SHIFT2
Shift1 : jaune et slow blink
Shift2 : violet et fast blink

	EVENT	Invert	OP1	Alt	Ext	LED #	LED MODE	COLOR MODE	COLOR 1	COLOR 2
5	MaRS fault	☐	7	-	☐	1	Fast blink	Color2	0:3:0	3:0:0
6	BUS Error	☑	0	-	☐	2	Constantly	Color1	0:3:0	3:0:0
7	BUS Error	☐	0	-	☐	2	Fast blink	Color2	0:0:0	5:0:0
8	POV Active	☑	1	-	☐	11	Constantly	Color1	3:0:0	0:0:0
9	SHIFT	☐	1	-	☐	10	Slow blink	Color1	7:7:0	7:0:0
10	SHIFT	☐	2	-	☐	10	Fast blink	Color1	2:2:7	0:0:0
11	External	☐	0	-	☐	0	OFF	Color1	0:0:0	0:0:0
12	External	☐	0	-	☐	0	OFF	Color1	0:0:0	0:0:0
